HISAFE is based in Cape Town and provides services to the Occupational Health & Safety, and in particular, the working at heights market. We aim to provide the client with all the necessary and relevant services to ensure complete compliance with national legislation. From the basic documentation of risk assessments and fall protection plans to the supply and installation of fixed and temporary certified fall arrest / prevention systems and personal protective equipment to be used on site. Some of the services provided by **HISAFE** are:

Site Inspection/ Survey & Needs Analysis (Gap Analysis)

A visit to the client site to investigate and from a first-hand perspective observe tasks being performed, allows our specialists to provide you with a *Needs Analysis* that details the current requirements as posed by legislation, measured against the client's own internal protocols, and what needs to be implemented to conform to legislative requirements.

Site Specific Risk Assessments & Fall Protection Planning

A risk assessment is a systematic examination of a task, job or process that you carry out at work for the purpose of; Identifying the significant hazards that are present (a hazard is something that has the potential to cause someone harm or ill health).

The Site Specific Risk Assessment aims to identify the on-site hazards and risks workers are exposed to, and to provide suggested controls to mitigate identified risks thereby ensure that employees are made aware of dangers. A hazard analysis is used as the first step in a process used to assess risk. The result of a hazard analysis is the identification of different type of hazards.

Stemming from the *site survey and needs analysis*, a site specific baseline risk assessment will identify specific areas where workers perform other jobs or tasks that may have to be assessed individually. Through the documentation of an issue or task based risk assessments, it may be recognised that employees are exposed to certain risks and that may require them to perform tasks at height.

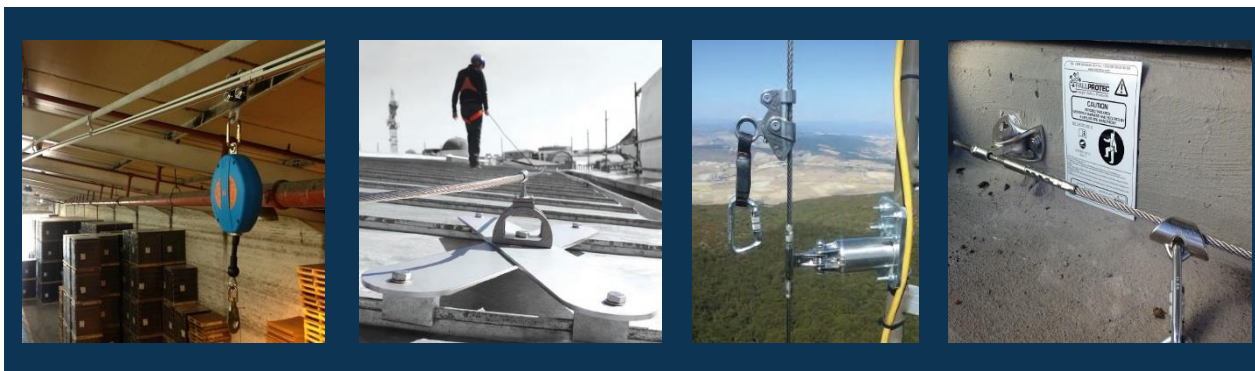

A site specific fall protection plan is documented that provides the client with a risk assessment pertaining to the work done at height as well as all required *written safe working procedures*. The documented risk assessment and fall protection plan also provides the client with suggested controls to mitigate the hazards / risks that employees are exposed to. These *mitigation controls* includes:

- Task specific training requirements,
- Written safe work procedures,
- P.P.E. & Equipment requirements,
- Engineered controls that may need to be installed (fixed installed systems / structures),
- Technical specification and standard conformances required for all suggested controls.
- Photos used for Step-By-Step visual presentation of safe working procedures that may be used for training and induction purposes.

Fixed & Certified Fall Arrest / Prevention Systems

HISAFE (Pty) Ltd are partnered with two international specialist manufacturers of some of the world's best certified fixed fall arrest systems, Fallprotec and Kee Safety. We offer specialist solutions for work in high environments. We provide installations, services, equipment and training to master working at heights! We supply gear drawn from some of the leading brands of height safety and rescue equipment internationally and are able to supply solutions to a variety of height safety challenges, including:

- Fall Protection Equipment & Training
- Fixed & Certified Fall Arrest / Fall Prevention systems
- Rope Access Equipment & Training
- Lowering and Lifting Systems
- Rescue and Rescue Equipment

Client Safety File / Site File and Documentation

As many OHS professionals working for larger companies knows, dealing with smaller sub-contractors can often be very stressful due to the shortcomings in light of their OHS requirements. One of the most basic requirements to be able to work on any client's site, is the site or safety file and its documentation. This file is a legal requirement and an integral part of a safety management system that must be site specific and needs to be kept up to date and on site by the sub-contractor. With many years' experience **HISAFE** can assist sub-contracting companies to prepare, update and maintain their safety files. Some of the documents provided through this service includes:

- Company Specific Health & Safety Policy
- Company Specific Health & Safety Plan
- Company / Site Environmental Management Plan
- Company / Site Specific Emergency Preparedness Plan
- Company Risk Assessment Policy
- Scope of Work
- Incident Management & Investigation
- All Legal Appointments

Fall Protection Equipment & Kits

We offer a wide variety of standard carrying equipment from leading international brands in:

- Rooftop or overhead fall arrest & restraint systems
- Temporary horizontal lines
- Mechanical fall arrest & evacuation devices
- Safety harnesses, fall arrest lanyards, work positioning lanyards
- Industrial climbing helmets
- Connectors & webbing slings
- Complete working at height kits, etc.

Training

HISAFE works to provide working at heights and rope access training. Courses are specifically designed to address typical risks OHSE personnel must often deal with. The courses incorporate international standards and practices and are presented by certified and accredited facilitators with years' experience.

Courses presented range from basic shop floor training aimed at the workforce, to highly technical, specialist modern risk assessment techniques for functional specialists and basic working at height techniques. We also offer a range of specialised courses for working at heights, height safety rescues and rope access.

Courses presented includes:

- Basic Working at Heights and Fall Arrest (1 Day)
- Ladder Safety (1 Day)
- SHE Representative (1 & 3 day)
- Incident Investigation (1 day)
- SHEQ Awareness (1 day)
- SHEQ General Health & Safety training (2 days)
- Legal Liability for Supervisors & Managers (1 Day)
